Faculty of Physics and Applied Informatics

wfis.uni.lodz.pl
dziekanat@fis.uni.lodz.pl
• Number of students – 650
• Number of employees – 86
• Number of departments – 6
• Number of fields of study – 2

About the faculty

The Faculty of Physics and Applied Informatics of the University of Lodz is a place for people who look for new technical solutions, who are focused on the analysis of natural phenomena and who learn about information and mobile technologies. The faculty has a high scientific position among Polish academic universities. The research conducted at the faculty is in the mainstream of world science and thus, ensures international recognition of the Faculty. Research projects, both in the field of basic and implementation research are conducted in cooperation with business. The research focuses on the following problems: theory of fundamental interactions, quantum information theory, cognitive science and machine learning algorithms, specification and analysis of business processes, properties of finite-dimensional systems, nanotechnology, astrophysics, high-energy cosmic rays, nuclear interaction physics, medical physics and radiological protection.

Participation in the international research consortia:

• MAGIC
• n_Tof, CERN Institute in Switzerland
• Pierre Auger Observatory in Argentina.

Faculty of Physics and Applied Informatics of the University of Lodz has been awarded the prestigious title of the Symbol of Synergy of Science and Business 2021 for its entire activity.
**Fields of study**

**First-cycle studies:**

- Physics
- Informatics - Engineer

**Second-cycle studies:**

- Physics
- Informatics

**Fields of study in English:** none
